Interested in moving ahead in math? Looking to brush up on certain math skills? The MCDS Summer Math Academy is now open for business!

This summer the MCDS Math Department is launching a new program for students looking to take summer math courses. The program is designed to be flexible around your summer schedule yet offer the personal teaching attention that you may need. Through a combination of computer software and an assigned teacher you will be able to complete a fully supported math course and still have your days at the beach!

How it Works

Students enrolling in a summer math course will receive as part of the course cost a text and software package. Students will be required to install the software package on their home computer or laptop and then go on-line to enroll in an assigned teacher's course. While the computer software will give you the curriculum, specific assignments and assessments will be delivered to you on-line from your teacher. But do not worry! You are not left alone! Aside from the text, tutorials, and videos available with the course software, teachers will be available to you through email and weekly office hours to assist you when you need! There is even free technical support!

Do I Qualify?

Students looking to take a summer math course for advancement need to be honest with themselves about their ability to work and manage their time independently. They also need to have a minimum current course grade of 85% and they must complete an application to receive teacher and math department approval.

* Summer School Geometry is only available as an on-campus course. Regular summer school dates and course costs apply. Contact Sandi Lewis for more details
